Inspection Report Comments

This report is a compilation of the SCL-LEA staff observations for the month of 2022 July.

The operator continue to work on their submitted Litter Management Plan to remove the scattered and accumulated litter around the site.

Two working faces were in use in the areas of CC3 and the newly lined cell of CC4-Part 4B/C. The dirt and the alternative daily covers were effective in covering up all waste at the end of the day's operation.

Disposal Facility (Site) Inspection Report (52)
Sunshine Canyon City/County Landfill (19-AA-2000)
7/29/2022

The spotters were directing traffic.

The portable water-atomizing cannons were in use. Misters were also in use on the perimeter fences and along the haul road for odor control.

The water trucks and sweepers were in use for dust control.

The bird control measures were in place to control the birds.

The load checks were conducted during this observation period.

The compliance perimeter gas probes on the city and the county sides were monitored during this inspection period. All perimeter probes were either non-detect for methane gas or below 1%, by volume, except for probes: 205R-C 1.4%, 205R-D 2.1% and 245-B 1.3%.

The construction of the berm and a new haul road, near the front of the landfill, continued during this observation period. The construction did not interfere with normal traffic flow in and out of the landfill, or caused on-site safety hazards as of this observation period. A spotter was present and road signs were posted and visible to the drivers on the current haul road.
