

**PACOIMA RESERVOIR RESTORATION PROJECT**  
**IF IT COMES TO SUNSHINE CANYON LANDFILL**

If we look at **Phase 1 over 5 years**, then:

1.5 million cu yd x 1.5 tons/cu yd = 2,250,000 tons/yr.

2,500,000 tons/yr. divided by 5 years = 450,000 tons/yr. divided by 20 tons/truck = 22,500 trucks/year

22,500 trucks/year divided by 250 working days/year = 90 trucks/day

90 trucks/day x 20 tons/truck = 1800 tons/day

**Phase 1 & 2 over 15 years**, then:

5.5 million cu yd x 1.5 tons/cu yd = 8,250,000 tons/yr.

8,250,000 tons/yr. divided by 15 years = 550,000 tons/yr. divided by 20 tons/truck = 27,500 trucks/year

27,500 trucks/year divided by 250 working days/year = 110 trucks/day

110 trucks/day x 20 tons/truck 2200 tons/day average

W. Hunter
