Areas of Concern

27 CCR 20921 - Gas Monitoring and Control

- (a) To provide for the protection of public health and safety and the environment, the operator shall ensure that landfill gas generated at a disposal site is controlled in such a manner as to satisfy the following requirements:
- (1) The concentration of methane gas must not exceed 1.25 percent by volume in air within any portion of any on-site structures.
 - (2) The concentration of methane gas migrating from the disposal site must not exceed 5 percent by volume in air at the disposal site permitted facility boundary or an alternative boundary approved in accordance with Section 20925.

Disposal Facility (Site) Inspection Report (52)
Sunshine Canyon City/County Landfill (19-AA-2000)
11/30/2023

On 11/15/2023, the county side perimeter gas probes monitoring was conducted. All perimeter probes were either non-detect for methane gas or below 1%, by volume, except for probes: 205R-C @ 2.1%, 205R-D @ 3.8%, 243-A @ 1.7% and 245-B @ 3.8%. Compliance Wells #205R and #245 should be further monitored to determine if the methane gas increases came from landfill gas migration, or from natural decomposition in the native soil. The compliance perimeter gas probes on the city side was also monitored during this inspection period.

Inspection Report Comments

This report is a compilation of the SCL-LEA staff observations for the month of 2023 November.

The landfill was closed on Thursday, November 23rd for Thanksgiving.

Weather conditions were mostly cool with two days of rain during this inspection period. The landfill received approximately 1.07 inch of accumulated rainfall in the month of November, according to the operator's rain gauge located on site. The slopes and the storm water drainage system held up well during the rainfall and as of this inspection.

One working face was in use in the CC4-Part 4 B/C area. The dirt covers and the alternative daily covers were effective in covering up all waste at the end of the day's operation.

The spotters were directing traffic during this observation period.

The bird control measures were in place to control the birds.

The water trucks and sweepers were in use for dust control on the days that did not rain.

The portable water-atomizing cannons were in use. Misters were also in use on the perimeter fences and along the haul road for odor control.

There were adequate lighting during the hours of darkness during this observation period. The operator also ordered more portable light towers for use during the darker winter months.

The load checks were conducted during this observation period.

The construction of the new diverted haul road near the front of the landfill continued during this observation period. The construction did not interfere with normal traffic flow in and out of the landfill, or caused on-site safety hazards. A spotter was present and road signs were posted and visible to the drivers on the current haul road, as of this observation period.
