·Estimated based on size and configuration of working face

·Estimated based on maintenance/beneficial use project needs during the month

For the month of February 2024, the material included in the table above was received from: WF Holdings, L.A.C. Flood Control District, Valverde Construction, Tutor Perini O&G, and Tutor Purple Line 2.

When material arrives at the site, site personnel make real-time decisions to either send the material directly to the working face for application as daily cover/a staging area directly next to the working face for use that week, or directly to a maintenance/beneficial use project elsewhere on the site. Any material that is not utilized immediately within the week for one of these two uses is stockpiled for future use (see attached map indicating location of stockpile).

The 2,500 tpd limit on beneficial reuse material does not apply to clean dirt used as daily cover.

Republic Services is required to prioritize the use of the imported soil for the purposes of cover on Saturdays to reduce and/or eliminate the odor nuisance impacting the community and to protect public health and safety. During the month of February 2024, SCL was able to fully cover on all Saturdays.

Should you have any questions please don't hesitate to reach out to our team.

Sincerely,

*Andrew Asaro*
