**Subject: Fourth Quarter 2024 Quarterly Dust/Odor Complaint Report  
Sunshine Canyon Landfill, CUP 00-194-(5), Condition 45N**

Dear Mr. Nguyen:

Condition 45N of the Sunshine Canyon Landfill CUP 00-194-(5) requires quarterly reporting of the following:

- Fugitive dust and odor complaints received from residents.
- Notices of Violation issued by the SCAQMD or the LEA.
- Measures undertaken by SCL to address the complaints and to correct the violations.

Attached to this cover letter, please find the above information for the Fourth Quarter of 2024.

Should you have any questions regarding the information provided in this report please feel free to contact me directly at (661) 208-9796 or at [ozamorano@republicservices.com](mailto:ozamorano@republicservices.com)

Sincerely,

*Bryan Zamorano*

Bryan Zamorano  
Environmental Specialist  
**Sunshine Canyon Landfill**

### October 2024

Compliance Summary (SWFP 16.e, Q-C.2.b, IMP X.B.7 & IMP X.B.6): There were no calls from the private citizen caller complaints through the Sunshine Canyon 24-hour hotline in October 2024.

Record of receipt of any violations from any regulatory agency (SWFP 16.f): SCL received 11 NOV's from SCAQMD on October 2, 2024, October 8, 2024, October 11, 2024, October 21, 2024, October 22, 2024, October 23, 2024, October 25, 2024, October 26, 2024, October 30, 2024 and October 31, 2024, for alleged odors on October 1, 2024, October 8, 2024, October 11, 2024, October 21, 2024, October 22, 2024, October 23, 2024, October 24, 2024, October 25, 2024, October 26, 2024, October 30, 2024 and October 31, 2024, During the month of October.

### November 2024

Compliance Summary (SWFP 16.e, Q-C.2.b, X.B.7 & IMP X.B.6): There were no private calls from the private citizen caller complaints through the Sunshine Canyon 24-hour hotline in November 2024.

Record of receipt of a violation from any regulatory agency (SWFP 16.f): SCL received six NOV's from SCAQMD on November 1, 2024, November 9, 2024, November 13, 2024, November 14, 2024, November 21, 2024, and November 22, 2024, for alleged odors on November 1, 2024, November 8, 2024, November 13, 2024, November 14, 2024, November 21, 2024, and November 22, 2024, During the month of November.

### December 2024

Compliance Summary (SWFP 16.e, Q-C.2.b, IMP X.B.7 & IMP X.B.6): There were no private calls from private citizen caller complaints through the Sunshine Canyon 24-hour hotline in December 2024.

Record of receipt of a violation from any regulatory agency (SWFP 16.f): SCL received two NOV's from SCAQMD on December 5, 2024, and December 20, 2024, for alleged odors on December 5, 2024, and December 20, 2024, During the month of December.

### Measures Undertaken to Address Complaints and to Correct Violations

The site team has implemented multiple projects specifically to address odors due to the generation of landfill gas and leachate, which are a natural byproduct of waste decomposition, and solid waste. SCL is also continuously working to address

potential odors at the working face from the material coming into the landfill daily. A review of the odor complaints and details on the specific projects and actions are detailed in the sections below:

### 1. Odor Patterns and Sources

At the time of finalizing this report, AQMD has yet to published statistic data for December 2024. December's information will be included in the First Quarter Dust & Odor report.

A breakdown of the odor patterns which includes date(s) and time(s) of verified odor complaints, the nature, source, and cause of the odor are provided in Attachment B. Attachment B also provides the trend and NOV history of odor complaints for SCL from 2010 through November 2024. The analysis of the odor patterns provided by South Coast Air Quality Management District provides insight to the percentages of the complaints that were verified as Trash, Landfill Gas, "Mix" meaning an odor is identified as a mixture of landfill gas and trash odor, "NFR" meaning there was no field response by the district, and "none", meaning no odor was detected by the responding inspector. Below is a breakdown of that data.

	Oct-24										Other						NOVS
	Total Call	Unverified	Verified	Trash	LFG	Mix	NFR	None	Other source	% Trash	% LFG	%NFR	%None	%Mix	% Other S

Table 1. South Coast Air Quality Management District-Sunshine Canyon Monthly Odor Complaints

In Q4 compared to Q3 of this year, there was an increase in verified complaints and NOV's. The number of odor complaints during this period (October-November) was higher than the previous quarter. 291 complaints were recorded in Q3 compared to 546 in Q4. We expect this total number to be slightly higher when December's data to is released. The site received 19 odor-related NOV's in Q4, which is an increase from Q3's total of 6 NOV's.

In the month of October, SCAQMD received 405 calls with 25% (102) verified by the SCAQMD inspector as "Trash" odors, 5% (20) identified as "Landfill Gas", 0% identified as "Mix", and the remaining 70% (283) identified as either "No Field Response" or "None" ("None"-No odor detected by regulator after a call was recorded in their data system as an SCL sourced odor).

In the month of November, SCAQMD received 65 calls with 37% (52) verified by the SCAQMD inspector as "Trash" odors, 12% (17) identified as "Landfill Gas", 0% identified as "Mix", and the remaining 51% (72) identified as either "No Field Response" or "None" ("None"-No odor detected by regulator after a call was recorded in their data system as an SCL-sourced odor).

As shown in the data above, the reported causes of those odor complaints that were verified by an SCAQMD inspector varied between landfill gas and trash odors. Experience has taught us that it is often difficult for an observer to distinguish between landfill gas and trash odors, and landfill gas odors are often mistaken for trash odors. There are also alternate sources of odors in the neighborhood that are unrelated to the landfill (e.g. sewage, stormwater basins, residential trash bins, etc.).

Landfill gas odors can be the result of changes in barometric pressure and adverse wind conditions or construction activities at the landfill, as well as under-performing infrastructure that may affect the efficiency of individual GCCS components. Trash odors can be the result of the incoming waste which can, at times be more odorous when combined with unfavorable wind patterns that may carry those odors into the surrounding neighborhood.

The overall improvements that were completed to the gas collection and control system (GCCS) have enhanced collection efficiency in particular areas, thereby reducing landfill gas (LFG) odors. Additionally, the Odor Patrol and Operations teams are taking extra precaution in addressing any detected odors on-site and are responding promptly to changing conditions.

The following measures have been implemented to mitigate odors and eliminate potential nuisance to the community:

- The site maintains a dedicated Odor Patrol Team that patrols the site and the neighborhood every day. This Odor Patrol team has proven to be effective at preventing odor nuisance by driving and walking around each

neighborhood to detect any potential Sunshine Canyon Landfill-sourced odors. Throughout the patrol, data is collected and compared to weather patterns. The neighborhoods that are inspected by the Odor Patrol team are identified on the maps provided. (Attachment C).

- The site team personnel are trained to identify particularly odorous loads, and those loads can be delayed in landfilling, if necessary, by parking them (covered) until wind conditions are favorable.
- The LFG OM&M team provides oversight on a weekly basis and makes improvements and installs, repairs, or replaces pumps.
- The site operates two fixed misting lines with neutralizer at the front entrance main haul road and above the closure turf. These two systems run continuously (24 hours a day).
- The site operates up to seven moveable buffalo monsoon units with neutralizer to support mitigation of odors on an as-needed basis for point-source odors, such as well-drilling.
- The site operates three fixed perimeter vapor unit systems with a specific design to atomize the chemical neutralizer product. These three systems run continuously (24 hours per day).
- The site operates three semi-portable odor control fan-trailers (referred to as "Odor Domes") throughout operational hours. These units are moved around the working face depending on wind conditions daily.
- The site operators implement a Foaming Spray at the working face with neutralizer to support the mitigation of odors.

### **3. Recent Odor Control Measures Implemented**

Beginning In November 2021, the SCL team began working with a new odor mitigation contractor. Since then, we have worked with them as they have tailored their neutralizer product to SCL's specific waste stream and odor composition. We continue to stay engaged with them to further tailor the

equipment and neutralizer to fit SCL's specific needs and evaluate its effectiveness. Additionally, the third-party contractor continues to make modifications to its neutralizers to improve its efficiency against our specific waste. As part of this partnership, we have placed three state-of-the-art odor control fan-trailer machines (referred to as "Odor Domes") at the working face and continually move them in accordance with our needs depending on weather conditions for any given day. SCL has been working to establish their optimal location in relation to the working face and are continuing to evaluate the preferred location.

A dedicated Operations and Maintenance team maintain the landfill gas collection and control system daily, as well as the leachate removal through pumps throughout the wellfield.

In addition, during the first quarter of 2024, a full well-field evaluation was performed by a third-party engineering consulting firm as part of the annual design process for GCCS improvements. The completed design of the wellfield expansion project was completed on April 15, 2024. A drill rig began the installation of vertical wells on April 22, 2024, and has completed operations in December 2024.

#### **4. Corrective Action Plan**

For landfill gas-related odors, the landfill's ongoing mitigation program consists of frequent gas well tuning (conducted a minimum of twice monthly), monthly surface emission monitoring, and the expansion, improvement, and maintenance of the gas collection system. The general timeline for additional work on the GCCS is as follows:

- a. In Q4, the site construction team installed 6,157 linear footages of new horizontal wells.
- b. The SCL site team installed 9 new vertical wells in Q4, totaling 119 new wells year to date.
- c. The site will continue working closely with the O&M contractor to address all gas-related odors through inspections, equipment adjustments, monitoring, etc. See previous section for descriptions of improvements.

For landfill trash-related odors, the landfill's ongoing odor mitigation strategies include the following:

In early 2024, the SCL-LEA provided a list of recommended odor mitigation measures for the site. As a result, SCL has implemented the following measures in accordance with their recommendations:

1. **Foaming Spray:** SCL began utilizing a foaming spray at the working face during morning hours in early March 2024 from the beginning of tipping operation until wind conditions shift or no odors are being detected off-site and have consistently used it daily since then. We have been working with our third-party odor mitigation consultant (Weaver) to develop the foaming/neutralizer product. Initially, the product did not appear to “bubble” or “foam up” enough to be visible. So, through additional iterations of the product it was enhanced to have a more “foaming” effect in mid-August. To date, the product has not appeared to have a significant effect on the number of trash odor complaints in the morning hours during unfavorable wind patterns. We will continue to work with our third-party consultant to refine the product as feasible.
2. **Enhanced Intermediate Cover:** Using the Rule 1150.1 monitoring grids as a guide, the team identified approximately 50 grids that could benefit from enhanced intermediate cover.
  - a. The team has been working to add an additional 6-12” of compacted soil to these grids approximately 46 of which have been completed to date. Once the 52 are complete, a new set of grids will be identified for additional intermediate soil cover.
  - b. As of October 15, 2024, posi-shell has been installed over an 8-acre area at the “switchback” or front face of CC4-P4. Posi-shell in this area will serve dual purposes: erosion control to better prevent erosion rills and potential for exposed trash in this area, and landfill gas-related odor control.
  - c. The site continues to receive mulch from local sources, which is delivered to the site and placed on top of the grids that have been

covered with additional intermediate soil. This practice further enhances the effectiveness of the intermediate cover.

3. Gabion Cubes/Horizontal Collectors: Since approximately 2018, SCL has consistently utilized gabion cubes in new cells where sufficient floor space allows for their installation. Currently, Cell CC5A has been constructed and is currently being filled at the floor level of the cell. The cell floor contains the first stage of "gabion" rock pads, which are being constructed simultaneously along with the trash fill. As of the current year, over 10,000 linear feet of horizontal and slope collectors have been successfully installed. The implementation of horizontal collectors has been a standard practice at Sunshine Canyon for several years.
4. Front Entrance Berm: The Front Entrance Berm is currently under construction. The project was significantly delayed due to initial permitting challenges but has now been fully approved and is in progress. The current estimated date of completion is approximately December 2026. At completion, the berm will also serve as a location for additional odor mitigation measures such as misting lines/vapor delivery systems or equivalent in addition to the berm physically closing off the mouth of the canyon.
5. Monitoring and Evaluation: SCL patrols the site and neighborhoods on a daily basis, documenting any potential odor sources. This, in conjunction with the surface emission monitoring data helps guide our decision-making in the success of these measures.

In late October 2024, the site received the Final Report of the Audit of Sunshine Canyon Landfill Operations and Odor Mitigation Efforts. This audit was conducted at the request of the Los Angeles Board of Supervisors during the Technical Advisory Committee meeting on April 9, 2024, by Ultra Systems. In response to the findings, SCL has initiated work on the implementation of the following measures, in accordance with the recommendations provided in the report:

1. Developing Ultimate Drainage Control Plan: SCL is working with Geo-Logics and Associates to improve upon existing Ultimate Drainage Plan.

2. Installation of wind meters and windsocks: SCL has two stationary weather stations located on the south ridge and near the observation deck. The windsocks have been purchased and will be installed once they arrive.
3. Prepare Plan showing current and future gas recovery capacity and future cell development: Currently, SCL and SCS Engineers are working together to improve upon the existing gas recovery capacity plans for current and future cell developments.
4. Prepare 5-year cell development plan: SCL is working with Weaver Consultants Group, that is conducting a wind current flow analysis in order to enhance the existing 5-year cell development plan to include odor mitigation strategies.
5. Analyze effective of the mulch application quarterly: The SCL team will assess mulch application efficiency by comparing surface emission monitoring results prior to and following mulch application.

In many instances, some of Ultra Systems' recommendations have already been implemented prior to the receipt of the report and will continue to be maintained, including:

1. Test exhaust from flares for mercaptans: H<sub>2</sub>S has been included in source testing during 2023 and most of the years prior to that, as a constituent of SCAQMD's Table 1 compounds from Rule 1150.1 and were non-detect.
2. Continued use of ADC on weekends: A Monthly ADC Report are prepared and submitted to the Los Angeles Department of Public Works by the 15th of each month. This report provides a summary of the ADC conditions for Saturday at close and Monday at opening, ensuring that the integrity of the ADC is preserved over the weekend. Any deficiencies or unusual occurrences are noted and disclosed.
3. Use of "Odor Domes" to manage fresh trash odors: SCL works in conjunction with Weaver Consultants Group to evaluate the conditions and relocate the Odor Domes to locations deemed to be most effective.

Odor control remains a top priority for the site team.

Mr. David Nguyen  
Fourth Quarter 2024  
Dust and Odor Report  
Sunshine Canyon Landfill  
January 15, 2024

The landfill remains committed to its goal of zero odor complaints. The site continues to reject particularly odors loads, or delay delivering materials during challenging conditions.
