Facility/Activity Information

Enforcement Agency: Sunshine Canyon Landfill Jurisdiction
SWIS Number: 19-AA-2000

Facility: **Sunshine Canyon City/County Landfill**
14747 San Fernando Road, Sylmar
Sunshine LF (in Los Angeles County), CA 91342

Activity: Solid Waste Landfill

Operational Status: Active
Regulatory Status: Permitted

Land Owners(s):

Browning-Ferris Ind. Of Calif., Inc.

The above facility was inspected for compliance with applicable sections of Division 30 of the Public Resources Code (PRC) and Title 14 and Title 27, California Code of Regulations (CCR).

No Violations

Areas of Concern

27 CCR 20921 - Gas Monitoring and Control

(a) To provide for the protection of public health and safety and the environment, the operator shall ensure that landfill gas generated at a disposal site is controlled in such a manner as to satisfy the following requirements:
(1) The concentration of methane gas must not exceed 1.25 percent by volume in air within any portion of any on-site structures.
(2) The concentration of methane gas migrating from the disposal site must not exceed 5 percent by volume in air at the disposal site permitted facility boundary or an alternative boundary approved in accordance with Section 20925.

The compliance perimeter gas probes on the city and the county sides were monitored during this inspection period. All perimeter probes were either non-detect for methane gas, or below 1%, by volume, except for probes: 205R-C @ 1.9%, 205R-D @ 2.7%, 245-B @ 4.6% and 245-C @ 1.4%. Compliance Wells #205R and #245 continue to be monitored for changes in methane gas concentration as of the end of this observation period.

27 CCR 20830 - Litter Control

Litter shall be controlled, routinely collected and disposed of properly. Windblown materials shall be controlled to prevent injury to the public and personnel. Controls shall prevent the accumulation, or off-site migration, of litter in quantities that create a nuisance or cause other problems.

Scattered litter was noted around the southern portion of the site, with more litter concentration in the South City area on the steep side slopes, the trees and hillsides to the south and near the entrance of the landfill.

No litter was observed going over the ridgeline and leaving the landfill property line during this observation period. The operator brought in additional crew to pick up the scattered litter and a significant amount of the litter has been removed from areas where it is retrievable. At this time, there are still areas, both retrievable and access-challenged areas with litter that requires more work. Windblown materials need to be better controlled to prevent the accumulation and off-site migration of litter. In the future, litter needs to be better controlled to prevent windblown materials from getting into the steep side slopes and/or leaving the site where it is irretrievable.

Inspection Report Comments

This report is a compilation of the SCL-LEA staff observations for the month of 2025 March.

Weather conditions were mostly cloudy and cool with a few days of rain during this observation period. The landfill received approximately 2.5 inches of accumulated rainfall during the month of March.

On March 12th, Mr. Ivan Palenyy from CalRecycle, conducted his 18-month State inspection of the Sunshine Canyon Landfill pursuant to the Public Resources Code (PRC), Section 43220. Mr. David Thompson, the Program Manager for the SCL-LEA, Ms. Lilit Baghumyan, SCL-LEA and myself were also present for the State inspection. Violations were cited for methane gas exceedance at compliance probe P-245-B; an Area of Concern was also noted for Litter Control by Mr. Palenyy. The SCL-LEA has since re-monitored Well P-245 and found all of the probes to be below the State's 5% methane gas limit at the permitted facility boundary, as of the end of this observation period.

Two working faces were in use in the CC4-Part 4B/C & CC5 areas.

The spotters were directing traffic during this observation period.

The water trucks and sweepers were in use for dust control.

The portable water-atomizing cannons were in use. Misters were also in use on the perimeter fences and along the haul road for odor control.

The load checks were conducted during this observation period.

There was adequate lighting during the hours of darkness during this observation period.

The construction of the liner-anchoring berm near the front of the landfill continued during this observation period. The construction did not cause significant interference with the normal traffic flow in and out of the landfill, or caused on-site safety hazards. Spotters were present when necessary and road signs were posted and visible to the drivers on the current haul road, as of this observation period.
