27 CCR 20921 - Gas Monitoring and Control

- (a) To provide for the protection of public health and safety and the environment, the operator shall ensure that landfill gas generated at a disposal site is controlled in such a manner as to satisfy the following requirements:
- (1) The concentration of methane gas must not exceed 1.25 percent by volume in air within any portion of any on-site structures.
 - (2) The concentration of methane gas migrating from the disposal site must not exceed 5 percent by volume in air at the disposal site permitted facility boundary or an alternative boundary approved in accordance with Section 20925.

The compliance perimeter gas probes on the city and the county sides were monitored during this inspection period. Probe 245-B had a 6.2%, by volume, methane gas concentration reading at the time of the inspection. Two independent gas monitors were concurrently used at the time of the inspection and both gas monitors received similar reading results.

The remaining perimeter probes were either non-detect for methane gas, or below 1%, by volume, except for probes: and 205R-C @ 2.1%, 205R-D @ 3.1%, 218-B @ 2.7%, 245-C @ 2.2%, and 245-D @ 1.1%. Compliance Wells #205R, #218 and #245 continue to be monitored for changes in methane gas concentration as of the end of this observation period.

On May 23, 2025, the operator submitted a Gas Remediation Workplan to the SCL-LEA for the 2025 March methane gas exceedance at the perimeter probe 245-B.

The operator has been implementing their proposed corrective actions of:

1. Additional tuning of LFG extraction wells located in the area.
2. Design and installation of new LFG extraction wells in the area of the probe.
3. Tuning and monitoring of new LFG extraction wells for a 60-day period.
4. Installation of a soil vapor extraction well in the area of the probe if elevated methane persists.

The operator was requested to submit an update to the SCL-LEA on the stages in development of their corrective actions plan to address the methane gas exceedance at probe 245-B.

No Areas of Concern

Inspection Report Comments

This report is a compilation of the SCL-LEA staff observations for the month of 2025 July.

The landfill was closed on Friday, July 4th in observance of Independence Day.

Weather conditions were mostly mild for the month of July with a few warm days toward the end of the month.

One working face was in use in the CC5-A area.

The spotters were directing traffic during this observation period.

The water trucks and sweepers were in use for dust control.

The portable water-atomizing cannons were in use. Misters were also in use on the perimeter fences and along the haul road for odor control.

The load checks were conducted during this observation period.

The construction of the flooring for the final cell is underway. The construction did not cause interference with the normal traffic flow in and out of the landfill as of this observation period. Spotters were present to direct construction truck traffic when needed. Road signs were posted and visible to the drivers along the current haul road.
