RE: Sunshine Canyon City/County Landfill
Monthly Activity Reporting – January 2026

Dear Mr. Nguyen,

By letter dated October 22, 2014, the County of Los Angeles, Department of Public Works (DPW) requested the submittal of a monthly activity report providing information on operational activities and occurrences at the landfill. In response to this request, the monthly activity report for the month of January 2026 is attached.

In addition to the attached report, the following information is provided:

- The installation of vertical gas wells and horizontal collectors are done in accordance with the procedures contained in the 'Construction Emissions and Odors Reduction Written Procedures' submitted to the South Coast Air Quality Management District (SCAQMD) on December 9, 2011.
- All flare shutdowns/startups are reported to SCAQMD as required and the corresponding Forms 500-N, Title V – Deviations, Emergencies and Breakdowns are submitted to SCAQMD on a monthly basis.
- During the month of January 2026, all flares operated in compliance with the site's Title V permit conditions;
- The data from the on-site weather stations is located at the SCL office and the southern berm portion of the City South portion of the landfill for January 2026.
- The LEA monthly inspection report for January 2026 was not provided to SCL by February 13, 2026. SCL will include it in February's Monthly Activity Report. SCL has included the most recent LEA monthly inspection report from December 2025. The report includes a detailed description of the site observations made by the LEA.

Inspection Information

Inspected By: Sunshine Canyon Landfill **Local Inspection ID:**
Inspection Date: 12/31/2025 **Time In:**
Inspection Type: Periodic **Time Out:**
Inspector: Meri Gasparyan **Inspection Duration:**
Operator: Browning-Ferris Industries of California, Inc.
Received By:
Also Present (Name):

Facility/Activity Information

Enforcement Agency: Sunshine Canyon Landfill **SWIS Number:** 19-AA-2000
Jurisdiction
Facility: **Sunshine Canyon City/County Landfill**
14747 San Fernando Road, Sylmar
Sunshine LF (in Los Angeles County), CA 91342
Activity: Solid Waste Landfill
Operational Status: Active **Regulatory Status:** Permitted
Land Owners(s):
Browning-Ferris Ind. Of Calif., Inc.

The above facility was inspected for compliance with applicable sections of Division 30 of the Public Resources Code (PRC) and Title 14 and Title 27, California Code of Regulations (CCR).

Violations

27 CCR 20921 - Gas Monitoring and Control

(a) To provide for the protection of public health and safety and the environment, the operator shall ensure that landfill gas generated at a disposal site is controlled in such a manner as to satisfy the following requirements:

- (1) The concentration of methane gas must not exceed 1.25 percent by volume in air within any portion of any on-site structures.
- (2) The concentration of methane gas migrating from the disposal site must not exceed 5 percent by volume in air at the disposal site permitted facility boundary or an alternative boundary approved in accordance with Section 20925.

Disposal Facility (Site) Inspection Report (52)
Sunshine Canyon City/County Landfill (19-AA-2000)
12/31/2025

The compliance perimeter gas probes on the city and the county sides were monitored during this inspection period. At the time of the inspection, Probe 245-B had a methane gas concentration reading of 8.5%, by volume. Two independent gas monitors were concurrently used at the time of the inspection and both gas monitors received similar reading results.

The remaining perimeter probes were either non-detect for methane gas, or below 1%, by volume, except for probes: and 205R-C @ 1.1%, 205R-D @ 1.9%, 218-A @ 4.8%, 218-B @ 3.4%, 245-C @ 2.8% and 245-D @ 1.1%. Compliance Wells #205R, #218 and #245 continue to be monitored for changes in methane gas concentration as of the end of this observation period.

Following the initial methane exceedance in March 2024, Republic Services launched a comprehensive investigation that utilized laboratory analytics to confirm the gas as landfill-derived. This diagnostic phase included a rigorous evaluation of historic monitoring data and land surveys to determine how the probes of compliance well P-245 interact with the facility's liner system. In response to these findings, the operator and its contractors intensified wellfield tuning efforts near the compliance well. Despite the periodic submission and implementation of several Gas Remediation Workplans to the SCL-LEA, these combined operational adjustments have yet to achieve consistent compliance.

Currently, environmental staff and consultants are conducting an intensive monitoring program for 245-B, providing weekly data transmissions directly to the enforcement agency. This 90-day assessment period, which commenced on November 1, 2025, represents the final evaluation window for existing remediation strategies. Should the probe remain out of compliance at the end of this period, the facility is prepared to implement more aggressive mitigation measures, pending approval from both the SCL-LEA and CalRecycle.

27 CCR 20820 - Drainage and Erosion Control

(a) The drainage system shall be designed and maintained to:

- (1) ensure integrity of roads, structures, and gas monitoring and control systems;
- (2) prevent safety hazards; and
- (3) prevent exposure of waste.

The observation period was characterized by cool, overcast conditions and four days of rain. The on-site rain gauge recorded a total of 9.98 inches of precipitation, further taxing a drainage system already strained by the previous month's rainfall. This resulted in increased erosion along the side slopes and the exposure of waste, particularly on slopes CC3B and CC5A below the current working face. Furthermore, several instances of tracked-in waste identified in the previous inspection - specifically within cells CC3A, CC3B, and CC4 Part-3 remain unaddressed at the end of this observation period.

Disposal Facility (Site) Inspection Report (52)
Sunshine Canyon City/County Landfill (19-AA-2000)
12/31/2025

The operator is required to take immediate action to cover all exposed waste and remediate the erosion on the slopes. In accordance with the approved Wet Weather Plan, site management must conduct a comprehensive assessment of all areas to document all storm-related damage. A complete report must be provided to the SCL-LEA detailing the necessary repairs along with a schedule of anticipated completion dates.

27 CCR 20690 - Alternative Daily Cover

Pursuant to 27 CCR 20690 (a)(2), the landfill operator is required to place over the entire working face at the end of each operating day either an approved alternative daily cover (ADC) or compacted earthen material to control vectors, fires, odors, blowing litter, and scavenging without presenting a threat to human health and the environment.

During this observation period, heavy rainfall and saturated working face conditions prevented the operator from applying full daily cover on a few occasions. Furthermore, high winds and wet weather compromised the Alternative Daily Cover (ADC), leading to areas of exposed waste.

Moving forward, the operator must ensure all ADC remains intact at the end of each shift. All waste at the working face must be secured with either an approved ADC or six inches of compacted soil. Should weather conditions prevent the application of daily cover, the facility must cease waste acceptance until operations can resume in full regulatory compliance.

27 CCR 20650 - Grading of Fill Surfaces

Covered surfaces of the disposal area shall be graded to promote lateral runoff of precipitation and to prevent ponding. Grades shall be established of sufficient slopes to account for future settlement of the fill surface.

By the end of the observation period, standing water was reduced to a few remaining ponds, primarily within the County areas. While the operator pumped the larger ponds intermittently, they have been formally instructed to remove all standing water on a regular basis. Notably, the large ponds in CC5 and across the decks of CC3A and CC3B were successfully eliminated before the period concluded.

To ensure long-term compliance, all covered surfaces of the disposal area must be graded to facilitate lateral runoff. Slopes must be steep enough to prevent ponding and

minimize water infiltration into the filled sections.

Inspection Report Comments

This report is a compilation of the SCL-LEA staff observations for the month of 2025 December.

While the landfill followed its standard holiday schedule by closing on Thursday, December 25th, for Christmas day, the month was largely defined by significant environmental challenges.

The weather remained predominantly cloudy and foggy with frequent high winds, culminating in a powerful atmospheric river event late in the month. This "Pineapple Express" storm deposited 9.98 inches of rain over a four-day period covering December 24, 25, 26 and 31st. Due to the combination of intense precipitation, high winds, and dangerously low visibility, the operator elected to keep the facility closed on Christmas Eve, Wednesday, December 24th.

Despite these severe weather conditions, site safety and maintenance protocols remained fully operational.

Staff managed traffic flow and operational safety throughout the period, with spotters consistently directing vehicles and load checks being performed as scheduled.

On the dryer days between storm fronts, water trucks and sweepers were deployed for dust control.

To control avian activity, both a falconer and noise-making shot launchers were utilized as bird deterrents.

Odor control measures were also maintained through the use of portable water-atomizing cannons, complemented by misting systems installed along the perimeter fences and the primary haul road.

Construction progress continued on the final cell, with lining work proceeding on days when precipitation allowed. This project did not interference with regular flow. Additional spotters were stationed to oversee construction-specific truck movements when necessary and clear signage remained visible to all drivers along the active haul road as of the end of this
