RE: Sunshine Canyon City/County Landfill  
Monthly Activity Reporting – February 2026

Dear Mr. Nguyen,

By letter dated October 22, 2014, the County of Los Angeles, Department of Public Works (DPW) requested the submittal of a monthly activity report providing information on operational activities and occurrences at the landfill. In response to this request, the monthly activity report for the month of February 2026 is attached.

In addition to the attached report, the following information is provided:

- The installation of vertical gas wells and horizontal collectors are done in accordance with the procedures contained in the 'Construction Emissions and Odors Reduction Written Procedures' submitted to the South Coast Air Quality Management District (SCAQMD) on December 9, 2011.
- All flare shutdowns/startups are reported to SCAQMD as required and the corresponding Forms 500-N, Title V – Deviations, Emergencies and Breakdowns are submitted to SCAQMD on a monthly basis.
- During the month of February 2026, all flares operated in compliance with the site's Title V permit conditions;
- The data from the on-site weather stations is located at the SCL office and the southern berm portion of the City South portion of the landfill for February 2026.
- The LEA monthly inspection report for February 2026 was not provided to SCL by March 13, 2026. SCL will include it in March's Monthly Activity Report. SCL has included the most recent LEA monthly inspection report from January 2026. The report includes a detailed description of the site observations made by the LEA.

# FACILITY INSPECTION REPORT

Disposal Facility (Site) Inspection Report (52)  
Sunshine Canyon City/County Landfill (19-AA-2000)  
1/31/2026

**Inspection Information**

**Inspected By:** Sunshine Canyon Landfill      **Local Inspection ID:**  
**Inspection Date:** 1/31/2026      **Time In:**  
**Inspection Type:** Periodic      **Time Out:**  
**Inspector:** George Kasikarin      **Inspection Duration:**  
**Operator:** Browning-Ferris Industries of California, Inc.  
**Received By:**  
**Also Present (Name):**

**Facility/Activity Information**

**Enforcement Agency:** Sunshine Canyon Landfill      **SWIS Number:** 19-AA-2000  
Jurisdiction  
**Facility:** **Sunshine Canyon City/County Landfill**  
14747 San Fernando Road, Sylmar  
Sunshine LF (in Los Angeles County), CA 91342  
**Activity:** Solid Waste Landfill  
**Operational Status:** Active      **Regulatory Status:** Permitted  
**Land Owners(s):**  
Browning-Ferris Ind. Of Calif., Inc.

*The above facility was inspected for compliance with applicable sections of Division 30 of the Public Resources Code (PRC) and Title 14 and Title 27, California Code of Regulations (CCR).*

**Violations**

**27 CCR 20921 - Gas Monitoring and Control**

- (a) To provide for the protection of public health and safety and the environment, the operator shall ensure that landfill gas generated at a disposal site is controlled in such a manner as to satisfy the following requirements:
- (1) The concentration of methane gas must not exceed 1.25 percent by volume in air within any portion of any on-site structures.
  - (2) The concentration of methane gas migrating from the disposal site must not exceed 5 percent by volume in air at the disposal site permitted facility boundary or an alternative boundary approved in accordance with Section 20925.

During this inspection period, compliance perimeter gas probes on both the city and county sides were monitored. At the time of inspection, Probe 245-B recorded a methane gas concentration of 7.9% by volume. This reading was verified concurrently using two independent gas monitors, both yielding similar results.

The remaining perimeter probes were either non-detect for methane gas or measured below 1% by volume, with the following exceptions: 205R-D @ 1.2%, 218-A @ 4.4%, 218-B @ 4.5%, 218-C @ 1.5%, 245-C @ 2.4% and 245-D @ 1.9%.

As of the end of this observation period, Compliance Wells #205R, #218, and #245 remain under continuous monitoring for changes in methane concentration.

Following the initial methane exceedance in March 2024, Republic Services launched a comprehensive investigation, utilizing laboratory analytics to confirm the gas was landfill-derived. This diagnostic phase included a rigorous evaluation of historical monitoring data and land surveys to determine the interaction between the probes of Compliance Well P-245 and the facility's liner system. In response, the operator and its contractors intensified wellfield tuning efforts near the well. However, despite the periodic submission and implementation of several Gas Remediation Workplans to the SCL-LEA, these combined operational adjustments have yet to achieve consistent compliance.

On January 13, Stephanie Young and Rachel Beck from CalRecycle visited the landfill to observe the gas monitoring of Compliance Well P-245. Following this visit, CalRecycle recommended that the operator install additional gas extraction wells in the vicinity of P-245, alongside other mitigation measures to be outlined in a compliance schedule issued by the SCL-LEA.

Currently, environmental staff and consultants are conducting an intensive monitoring program for Probe 245-B, submitting weekly data reports to the enforcement agency. This 90-day assessment period, which commenced on November 1, 2025, serves as the final evaluation window for existing remediation strategies. If the probe remains out of compliance at the conclusion of this period, the operator will be required to implement more aggressive mitigation measures, pending approval from both the SCL-LEA and CalRecycle.

### **Areas of Concern**

#### **27 CCR 20830 - Litter Control**

Litter shall be controlled, routinely collected and disposed of properly. Windblown materials shall be controlled to prevent injury to the public and personnel. Controls shall prevent the accumulation, or off-site migration, of litter in quantities that create a nuisance or cause other problems.

Scattered litter was observed across the southern portion of the site, with

concentrations on the South City side slopes, southern hillsides and near the landfill entrance.

To mitigate windblown debris, the operator installed litter netting to contain materials within retrievable areas. Following recent high-wind events, additional crews were deployed for cleanup. While significant progress has been made in accessible zones, litter remains in both retrievable and access-challenged areas.

The Local Enforcement Agency (LEA) has requested a written plan and timeline detailing how the operator will complete the cleanup. Moving forward, the operator must improve control measures to prevent debris from entering steep slopes or migrating off-site. The operator should consider suspending tipping and dumping activities during high-wind events and must ensure all litter is collected and disposed of promptly to prevent further migration.

**27 CCR 20820 - Drainage and Erosion Control**

- (a) The drainage system shall be designed and maintained to:
- (1) ensure integrity of roads, structures, and gas monitoring and control systems;
  - (2) prevent safety hazards; and
  - (3) prevent exposure of waste.

The observation period was characterized by cool, overcast conditions with five days of measurable precipitation. According to the on-site rain gauge, the landfill received 3.21 inches of rain during the first week of January. This followed an exceptionally wet period in late December, which saw 9.98 inches of accumulation.

This sustained precipitation overwhelmed the site's drainage systems, resulting in side-slope erosion and the exposure of waste, primarily on slopes CC3B and CC5A below the current working face. Additionally, tracked-in debris was observed within portions of cells CC3A, CC3B, and CC4 Part-3.

While equipment operators attempted immediate repairs to the daily cover, saturated soil conditions initially restricted machinery access. Remediation resumed once the ground stabilized and all erosions with exposed waste was re-covered by month-end. Some tracked-in debris remains and is slated for removal, or additional soil capping.

Per the Wet Weather Plan, management is to conduct a comprehensive damage assessment and prioritize the repair of all affected cover areas.

**Inspection Report Comments**

This report summarizes the SCL-LEA staff observations for 2026 January.

The landfill was closed on Thursday, January 1st, for New Year's Day.

Active filling occurred mostly in the CC5-A area. However, during and immediately following

rain, the working face moved to the prepared wet weather deck in CC4-Part 4 C.

Spotters directed traffic throughout this period.

Water trucks and sweepers provided dust control on dry days, while portable water-atomizing cannons and misting systems (along the perimeter and haul roads) were used for odor control.

Bird deterrents, including a falconer and shot launchers, were also in use.

Load checks were conducted as required.

Construction progress continued on the final cell, with lining work proceeding on days when precipitation allowed. This project did not interference with regular traffic flow. Additional spotters were stationed to oversee construction-specific truck movements when necessary and clear signage remained visible to all drivers along the active haul road as of the end of this observation period.
